

## WEIGHTED LEVER BARS

### New Product for Trunnion Assemblies

This product notice is to inform you that we have added two new lever bars for our trunnion assemblies.

When the fluid density in a production vessel changes, it becomes difficult for the trunnion assembly float to maintain interface. Previously this required shutting in the vessel and re-weighting the float.

With the new lever bar, you can add or remove weights outside the vessel to counteract the fluid and help move the float up or down.

These lever bars and the weights must be ordered separately.

#### Product Numbers for Weights

426 (11lb)

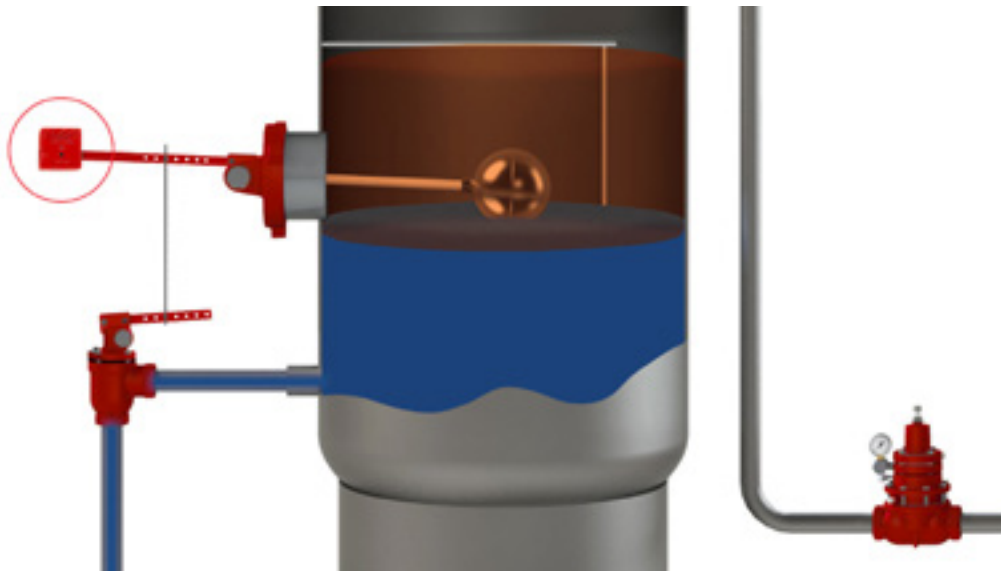

425 (9lb)

424 (7lb)

#### New Product Numbers

7591L24 (24 inch)

7591L36 (36 inch)
